Subject: Draft Infrastructure plan

I wish to comment on the contents of the Draft Infrastructure Plan.
The draft shows the upgrade to the waste water treatment facilities as "critical" and phased for 2020 to 2025. This will cause immensely increased traffic along the overloaded Collipriest lane whilst it is being built and an upgrade to the access to the treatment works is critical and phasing should be brought forward to 2014 to 2015.
It is also imperative that an upgrade to the main sewer is carried out sooner rather than later and certainly BEFORE any further development to the town is approved . Both of these matters are essential for the health of all the residents connected to the mains drainage in Tiverton Mary Seaton Higher Collipriest Tiverton Devon
