Dear Sir,  
In response to the Eastern Urban Extension, I would like to draw to your attention where all the run off water is going to. The rivers Loman & Exe can not take any more as was demonstrated last winter. The river Exe has been badly maintained for years with over hanging trees and sandbanks holding the water back.

The road and junction of the A361 should be put in place before any development is started. Halberton and the road through Blundells School is not suitable for construction lorries adding to road safety issues for school, children and elderly people.

Development must be sympathetic with the area were there is a row of bungalows, bungalows should be built next to them on the same level.

This development is far to big for Tiverton Post Mill has got some grade 1 land and shouldn't be built on.

I hope these comments will be helpfull and taken into consideration.

Your Sincerely

A. WARE
