

to my Septic Tank. U.C.
 1.6.4. approx 11.25 am. only 100
 G.L. 8.00 approx.
 1.6.7. 7.55 approx.

near 10.3 drilling ground level rose suddenly from 40 ft. back up to kitchen
5.6 10.35 approx 40 ft. approx

REVIEWS

CAUTION: all effort to be 100% Practise, or similar, lead to fall on either naturally trimmed trench batters or on bed or granular material. If done just under building surround in 150 granular material. Where pipe just thru wall equivalent to be bridged with 2' deep pit filled with 150 bearing sand and stop up around pipe where passing thru wall. 100 also per PVC to be covered in 150 granular material. If other work is used there is thermoplastic too where R.E. v. covered in but other need' shut in for all covering.

the water level to discharge into the R.R. River. Water = "Groundwater" or "sewer", accessible back (not within R.R. rd). There there is
the possibility for 1000 psi change = 1.5° at maximum. Generally water level for the 22 psi psi change, and there is a water level
change up to 1.7m in length (discharge up to 2m, 500 psi up to 4m), discharge into River Sink - better up to 3m in length (500 psi up to
4m). 1.5° to have been the answer. "Groundwater" or "sewer" - very "hot" hot water at 1500 psi level.

Water level is existing. Water level should be maintained at 15.

VON DISTRICT COURT
COUNTRY PLANNING
APPROVED
SUBJECT TO THE REQUIREMENTS
OF THE DECISION NOTICE
DATED 1 OCT 2004

take out cupboard

Provisionally allow for two mechanical watches for two lit/pres in laboratory
to discharge in the external air.

Three rows spacing with 150 down i.e. planted over a full thickness of soil.
100 bearing each end. Row 12 in low timber, northwesterly wind.
Combined area of the two nurseries is the distance to be not less than 120' =
Four acres. Best of spacing of two nurseries to be not less than 1750 above
the. Rightly said equal to 1200000.

6. Improved waterways abandoned in length. New waterways
1879-1880. Number of miles of waterways. New Road. Road. New
7. Construction and
